***Election/Restrictions***

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group A, claim(s) 1-22 and 25-40, drawn to a quasi-amorphous oxide compound and a device containing the said compound.

Group B, claim(s) 21-24, drawn to a method of making a quasi-amorphous oxide compound.

The inventions listed as Groups A and B do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: Group A does not require the step of applying a mechanical strain to a substantially amorphous compound as recited in Group B; thus the inventions do not have the same special technical feature.

If application elects Group A, an election of species must also be made:

This application also contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

The quasi-amorphous oxide compound having a formula  $(A_xB_{1-x})_pO_n$  and  $(A_xB_{1-x})(C_yD_{1-y})O_n$  (see below).

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply

Art Unit: 1796

must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The claims are deemed to correspond to the species listed above in the following manner:

Species of Group I.  $(A_x B_{1-x})_p O_n$ , claims 2, 3, and 38-40.

Species of Group II.  $(A_x B_{1-x})(C_y D_{1-y}) O_n$ , claims 4-20, 25-28, 30, 32-33, 35 and 37.

The following claim(s) are generic: Claims 1, 25, 19, 31, 34 and 36 appears to be generic.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: Species of Group II requires additional transition metals of element C and D while species of Group I consist of only the elements of A and B.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does

Art Unit: 1796

not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.
